Cloudpager for Citrix VDI and Citrix DaaS

Simplify the mobilization and management of Windows applications across your Citrix environments by centralizing them in the cloud.

MODERNIZE YOUR APPROACH TO APPLICATIONS

### True cloud adoption requires modern cloud technologies and processes

Most of today's cloud solutions are not multi-cloud nor do they support on-premises or hybrid systems. Moreover, many of these solutions introduce a steep learning curve for IT Administrators. As a result, enterprises continue to leverage their existing on-premises technologies for cloud initiatives, compounding the cost and complexity of cloud adoption that already serve as barriers to entry. That's where Citrix DaaS and Cloudpager come in.

Centralize the deployment and management of all your applications in the cloud

Delivered as a software-as-a-service (SaaS) solution, Cloudpager provides an intuitive mechanism to seamlessly provision application containers and application updates to any modern physical or virtual desktop across your enterprise within seconds. With point-and-click integration to Azure AD, you can rapidly onboard to the platform and establish a single application container deployment solution for all your application deployments.

BENEFITS OF CLOUDPAGER

Cloudpager provides a modern, feature-rich, and easy-to-use cloud management console. Designed to foster collaboration across IT teams, you can seamlessly orchestrate and manage application deployments across any modern cloud, hybrid, or on-premises Windows desktop environment in a highly automated fashion.

Accelerate Cloud Initiatives

Lift and shift applications to the cloud, instantly modernizing your desktop IT operations for the latest Windows desktop environments, such as Citrix DaaS, Citrix Virtual Apps and Desktops, Windows 365, physical desktops and laptops, and more.

Support Multiple Container Formats

Cloudpager supports multiple container formats, including Cloudpaging, App-V, and MSIX. This enables you to rapidly centralize all Windows applications in the cloud and easily manage them from a single pane of glass.

Eliminate Deployment Obstacles

Cloudpaging eliminates compatibility issues, ensuring your entire application estate can run on the latest Citrix virtual desktop environments in a friction-free manner. Cloudpager enables you to dynamically provision applications and updates directly to end user desktops within seconds.
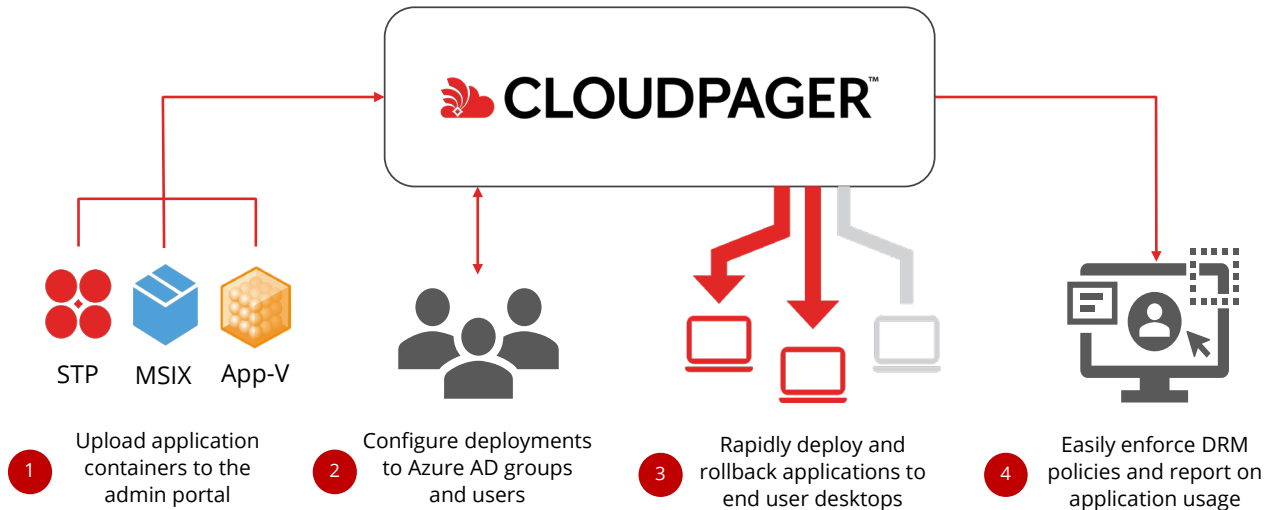

Reduce Application Packaging and Desktop Run Costs

Mitigate complex deployment configuration workflows, standardize on multi-session (without a need for application silos), achieve a single golden image, and offload back-end infrastructure to Numecent's InfoSec-secured cloud platform.

numecent®

CLOUDPAGER SIMPLIFIES APPLICATION MANAGEMENT

Built on Numecent's global cloud backbone, Cloudpager enables you to seamlessly deploy, update, rollback, and remove applications in any modern Windows desktop environment across your enterprise within seconds.

CLOUDPAGER™

STP   MSIX   App-V

1 Upload application containers to the admin portal

2 Configure deployments to Azure AD groups and users

3 Rapidly deploy and rollback applications to end user desktops

4 Easily enforce DRM policies and report on application usage

KEY USE CASES

Cloudpager enables you to simplify the mobilization and management of Windows applications across modern Windows desktop and multi-cloud environments from an intuitive cloud management console.

Hybrid desktop IT architectures: Seamlessly orchestrate and manage application deployments across on-premises, cloud, and multi-cloud desktop IT environments from Cloudpager's intuitive cloud management console.

Reduce DaaS adoption time and costs: Drag-and-drop application containers to Cloudpager and immediately start orchestrating deployments to virtual desktop users within a matter of minutes.

Run applications in multi-session environments: Enable applications that aren't built for cloud or multi-session environments to run on the least expensive Windows licenses. All in a secure and compliant environment.

Patching without reboots: Deploy applications to your Citrix VDAs in real time without requiring end users to logout or reboot.

Simplify desktop image management: Remove applications from your PVS base images or MCS Snapshots to alleviate image management and optimize your storage footprint by streaming applications from the cloud.

Legacy application deployment: Isolate and secure outdated application dependencies while allowing them to run as if they are natively installed.

Reduce application packaging: Cloudpaging containers can be reused across Windows devices and OS, eliminating the need to repackage apps.

Supported Environments
Windows OS
- Windows applications (32-bit and 64-bit)
- Any supported Microsoft Windows OS

Physical PC Support
- Windows 10/11 laptops
- Windows 10/11 desktops

DaaS and VDI Support*
- Citrix DaaS
- Citrix Virtual Apps and Desktops
- Windows 365

Cloudpager supports all modern Windows desktop environments
